SPACE SAVING GENESIS STACK-RACK

Install two Genesis boilers in the footprint of one! Up to 5 Million BTU’s!

Install four Genesis boilers in the footprint of two! Up to 10 million BTU’s!

Saves valuable floor space!

Get the fire power you need in those tight hard to fit boiler rooms!

**Sturdy** - The Stack-Rack is made of heavy angle and tubular steel. It is designed to be a sturdy and stable platform for the top mounted boiler. The upper boiler is mounted using heavy clamps that lock and bolt the upper boiler into position. The entire rack can be bolted to the boiler room floor for maximum stability.

**Factory Paint** - The Stack-Rack is factory painted with the same durable powder coat finish as the Genesis Boiler, and will remain rust free for years, even in those harsh boiler room atmospheres.

**Easy Assembly** - The Stack-Rack is shipped as a kit for field assembly and includes step-by-step instructions. Each part is clearly labeled, pre-cut, and pre-drilled for fast easy assembly.
