Cyclone® XL
750,000 - 1,000,000 BTU/H High Efficiency, Condensing Water Heaters With Modulating Burner

A. O. Smith Cyclone XL condensing water heaters have been designed to provide years of dependable service and feature industry leading technology. Models are available from 750,000 to 1,000,000 Btu/h and all deliver thermal efficiencies of 97%. The primary and secondary heat exchangers provide optimal service life while maximizing heat transfer.

Cyclone is the industry leader in high efficiency commercial water heating. Cyclone XL modulating models adjust firing rate to the specific demand further increasing efficiency and money savings.

INTELLIGENT CONTROL SYSTEM WITH TOUCH SCREEN DISPLAY AND ICOMM CONNECTIVITY ONBOARD*
- Exclusive A. O. Smith designed color touch display control system
- Display provides detailed water heater status information
- Precise temperature control adjustable from 90 to 180 degrees
- Built-in diagnostics
- Run history information
- Cyclone XL comes standard with iCOMM Wi-Fi connectivity onboard. Remotely monitor and adjust the water heater via the A. O. Smith app. No charge connectivity using Wi-Fi or Ethernet connection.
- Intelligent Demand Response ( IDR) feature senses large water draws and automatically adjusts the differential setpoint. This feature increases the hot water available when it is needed the most.

SUBMERGED COMBUSTION CHAMBER, WITH STAINLESS STEEL PRIMARY AND SECONDARY HEAT EXCHANGERS
- Positioned in center of tank, surrounded by water to virtually eliminate radiant heat loss from chamber
- Direct spark ignition
- Primary and secondary heat exchangers are constructed from stainless steel, with large surface areas to maximize heat transfer to the water
- Hot combustion gases are exhausted from the primary heat exchanger through a secondary heat exchanger, raising efficiencies further before the gases are vented. By this point, exhaust gases are cool enough to be safely vented through inexpensive PVC Schedule 40 pipe.
- ASME Construction

POWERED ANODES STANDARD ON ALL MODELS
- Provides long-lasting tank protection in varying water conditions
- Powered anodes are non-sacrificial
- Automatically adjusts output needed to properly protect the tank

PERMAGLAS® ULTRA COAT™ GLASS LINING
- Glass coating is applied using a liquid slush coating technique to ensure uniform coating
- Heat exchangers are glassed externally

MECHANICAL VENTING VERSATILITY
- Conventional power venting or direct venting
- Vents vertically or through a sidewall
- Front located exhaust and condensate connections allow for easy install and access
- Vents with low cost PVC Schedule 40 intake and exhaust pipe. Approved for optional CPVC Schedule 40, Polypropylene and AL29-4C stainless steel vent materials
- Canadian installations require ULC S636 PVC/CPVC, ULC S636 Polypropylene and AL29-4C stainless steel pipe for intake and exhaust

HIGH EFFICIENCY MODULATING PRE-MIX POWERED BURNER
- Down-fired pre-mix burner provides optimum efficiency and quiet operation
- Top-mounted burner position prevents condensation from affecting burner operation

5-YEAR LIMITED TANK / 1-YEAR LIMITED PARTS WARRANTY
- For complete warranty information, consult written warranty or go to hotwater.com
COMMERCIAL GAS WATER HEATERS

OTHER FEATURES:

SPACE-SAVING DESIGN FOR INSTALLATION FLEXIBILITY
- Large volume, integrated solution extends the Cyclone high-efficiency, condensing water heater line to 1,000,000 BTU/H
- Easy-to-remove top cover for convenient access to serviceable parts
- 0° installation clearances on sides and rear, 1-1/2” installation clearance on top
- Handhole cleanout allows easy access to tank interior for cleaning
- 0° clearance to combustibles, approved for installation on combustible floors

CODES AND STANDARDS
- CSA certified and ASME rated T&P relief valve
- Maximum hydrostatic working pressure: 160 psi
- All models are design certified by Underwriters Laboratories (UL), Inc., to ANSI Z21.10.3 - CSA 4.3 Standards
- Meets the thermal efficiency and standby loss requirements of the U.S. Department of Energy and current edition ASHRAE/IES 90.1
- Design Certified by Underwriters Laboratories to NSF standard 5 for 180°F (62°C) water
- Complies with SCAQMD Rule 1146.2 and other Air Quality Management Districts with similar requirements for ultra low-NOx emissions
- ASME tank construction standard on all model sizes

VENT REQUIREMENTS FOR BTHS 750A - 1000A

<table>
<thead>

**SPECIFICATION**

(Natural or Propane) gas water heater(s) shall be A. O. Smith Cyclone XL model # _________ or equal, minimum 97% thermal efficiency, a storage capacity of 120 gallons, an input rating of __________ BTUs per hour, a recovery rating of ___________ gallons per hour (gph) at 100°F rise and a maximum hydrostatic working pressure of 160 psi. Water heater(s) shall: 1. Modulating gas burner that automatically adjusts the input based on demand. 2. Powered anodes that are non sacrificial and maintenance free. 3. Have seamless glass-lined steel tank construction, with glass lining applied to all water-side surfaces after the tank has been assembled and welded; 4. Meets the thermal efficiency and/or standby loss requirements of the U. S. Department of Energy and current edition of ASHRAE/IES 90.1; 5. Have foam insulation and a CSA Certified and ASME rated T&P relief valve; 6. Have a down-fired power burner designed for precise mixing of air and gas for optimum efficiency, requiring no special calibration on start-up; 7. Be approved for 0° clearance to combustibles.

The control shall be an integrated solid-state temperature and ignition control device with integral diagnostics, graphic user interface, fault history display, and shall have digital temperature readout. No charge connectivity shall be provided allowing for remote viewing and fault notification via app. 1. All models are design certified by Underwriters Laboratories (UL), Inc., according to ANSI Z21.10.3 - CSA 4.3 standards governing storage type water heaters; 2. Meet the thermal efficiency and standby loss requirements of the U. S. Department of Energy and current edition ASHRAE/IES 90.1. Complies with SCAQMD Rule 1146.2 and other air quality management districts with similar requirements for low NOx emissions.

750,000 - 1,000,000 BTU Input: For Standard Power Venting: Water heater(s) shall be suitable for standard power venting using a 6” diameter PVC pipe for a total distance of 100 ft. equivalent feet of vent piping. For Power Direct Venting: Water heater(s) shall be suitable for power direct venting using a 6” diameter PVC pipe for a total distance of 100 ft. equivalent feet of vent piping and 100 ft. equivalent feet of intake air piping.

Operation of the water heater(s) in a closed system where thermal expansion has not been compensated for (with a properly sized thermal expansion tank) will void the warranty.
